

DULMINA HASITH

Aspiring Security Engineer | Systems & Security Automation | Linux Infrastructure
Bandarawela, Sri Lanka | +94 70 154 0194 | dulminahasith43@gmail.com
[LinkedIn](#) | [GitHub](#) | [CyberPodda SL](#) | [Portfolio](#)

Security-focused Systems & Automation Specialist and Information Technology student pursuing an NVQ Level 6 Higher National Diploma (HNDIT) at SLIATE. Independently audits live small-business networks for real-world risk and has engineered SentinelX, a working SIEM prototype processing 50,000 log events per day and flagging four distinct security alert types (brute-force login, SSH anomaly, privilege escalation, and ANSI terminal injection). Strong technical foundation in Linux CLI administration, Python automation, threat intelligence, OSINT methodologies, and network reconnaissance. Seeking a Cyber Security Intern or SOC Analyst Intern role to apply log parsing, packet analysis, and automated threat data collection skills under real incident load, while expanding into incident response and defensive security operations.

TECHNICAL SKILLS

Cybersecurity & Threat Research: Threat Intelligence Concepts, OSINT Methodologies, Network Reconnaissance, Vulnerability Assessment, Log & Packet Analysis (Wireshark, Nmap), Small Business Security Auditing, OWASP Top 10 Fundamentals

Automation & Scripting: Python (Security Automation, Log Parsing, Web Scraping), Bash Scripting, REST APIs, n8n, JSON & Structured Data Processing

Security & Testing Tools: Burp Suite, Nmap, Wireshark, Metasploit, Kali Linux CLI, Git, Ci/CD(github actions), Docker (Basics), bcrypt, SSH, Base64, xxd

Systems & Infrastructure: Linux Administration (Fedora, RHEL, Ubuntu, Kali, Mint), Windows OS, LAN Setup, Router/Switch Configuration, Hardware Diagnostics & Maintenance

Web Technologies: HTTP/S, HTML5, CSS3, JavaScript, Flask

Web Servers: Apache, Nginx

Databases & Cloud: SQL / Relational Database Management, Cloud Computing Fundamentals

Communication & Content: Technical Writing (Audit Reports, Vulnerability Write-ups), Security Education Content Creation, Plain-Language Risk Communication

PROJECTS

Independent Small Business Security Audits

Vulnerability Scanning, Network Posture Assessment, Client Reporting

- Conduct security measurements, vulnerability scans, and network posture assessments for local small businesses to identify exposure risks and recommend hardening measures.
- Performed configuration reviews on live business infrastructure independently, with no academic supervision or grade attached.
- Documented findings and walked business owners through plain-language remediation steps.

SentinelX — Security Monitoring & Log Analysis System

Python, Flask, bcrypt, Linux CLI, REST APIs, CI/CD, Virtual Machine, HTML/CSS/JS

github.com/dulmina-hasith/sentinelx

- Engineered a lightweight, web-based SIEM prototype in Python/Flask to address the lack of cost-effective, real-time security event visibility for small system environments.
- Designed and built the full backend architecture solo — REST endpoints, threshold-based alerting logic, and bcrypt-secured authentication.
- Processes 50,000 log events per day and flags four distinct alert types: brute-force login, SSH anomaly, privilege escalation, and ANSI terminal injection attacks.

Network Reconnaissance & Threat Research Lab

Nmap, Linux CLI, Bash, Packet Analysis, Technical Documentation

github.com/dulmina-hasith/networking-lab

- Authored technical vulnerability reports detailing exposure risks and mitigation strategies, published on GitHub with home lab findings.
- Executed host discovery, open port scanning, and service version detection using Nmap and custom CLI scripts.
- Conducted systematic network discovery and service enumeration across lab environments to evaluate external attack surface exposure.

CyberPodda SL — Automated Cybersecurity Trend Intelligence & Digest Pipeline

n8n, Docker, Docker Compose, PostgreSQL, Google Gemini API, REST APIs, RSS, Telegram, Oracle Cloud, Nginx
github.com/dulmina-hasith/cyberpodda-n8n

- Designed and deployed a containerized cybersecurity intelligence automation pipeline on an Oracle Cloud Free Tier instance using Docker Compose, n8n, and PostgreSQL.
- Integrated multiple sources (Hacker News, Reddit, Dev.to, BleepingComputer, Product Hunt), normalizing and deduplicating content before ranking security-relevant items.
- Automated AI-assisted summarization via the Google Gemini API, with curated security digests delivered to a Telegram channel every 12 hours.

Practical Cybersecurity Labs & CTF Challenges

PWN.college, OverTheWire, TryHackMe, HackTheBox

- Completed OverTheWire Bandit (Levels 0–34) and privilege-escalation / Linux file-system labs.
- Built automated Bash helper scripts to streamline CTF workflows.

[Full writeups: github.com/dulmina-hasith/ctf-exploit-scripts-writeups](https://github.com/dulmina-hasith/ctf-exploit-scripts-writeups)

EXPERIENCE

SLIATE, BADULLA, SRI LANKA | **IT Lab Assistant (Self-Initiated)**

2023 – 2026

- Built and configured a Red Hat Enterprise Linux (RHEL) server on lab hardware for hands-on Linux administration, system security, and OS hardening experience.
- Maintained, configured, and hardened 30+ desktop systems and lab networking infrastructure, ensuring continuous availability for 200+ IT students.
- Diagnosed and resolved hardware, software, and OS issues, reducing downtime during practical academic sessions.
- Assisted with LAN setup, router/switch configuration, and troubleshooting for lab environments.
- Supported staff and peers with workstation troubleshooting, software installation, and foundational security practices.

B/DHARMAPALA COLLEGE, BANDARAWELA | **IT Lab Coordinator**

2019 – 2022

- Managed daily computer lab operations and maintenance of 20+ desktop workstations and peripherals.
- Executed routine software updates, system maintenance, and hardware inventory tracking.
- Assisted teachers during ICT practical sessions, guiding students through computer fundamentals, operating systems, and basic programming.

EDUCATION | CERTIFICATIONS

HND in Information Technology (NVQ Level 6), SLIATE, Badulla

Expected 2028

Relevant Modules: Networking & Data Communications | Operating Systems | Database Management | Web Technologies | Cloud Computing Fundamentals | Programming & Software Development

G.C.E. A/L — Engineering Technology Stream (ICT), B/Dharmapala MV, Bandarawela

2022

Certifications: IBM Cybersecurity Analyst Professional Certificate — IBM / Coursera (In Progress). Focus: Cybersecurity Roles & Processes, OS & Network Security, Cyber Attack Countermeasures, Forensics Basics.

ADDITIONAL INFORMATION

- **Specialized Career Focus:** SOC monitoring, SIEM event analysis, threat hunting, and penetration testing methodologies.
- **Custom Tool Engineering:** Builds open-source Python security utilities, automated log parsers, and threat intelligence scripts.

- **Practical Cybersecurity Training:** Continuously practices hands-on cyber defense, log analysis, and vulnerability exploitation via TryHackMe, Hack The Box, and OverTheWire.
- **Security Content Creator:** Runs CyberPodda SL, a cybersecurity education page producing explainers and technical content for a Sri Lankan audience.
